Actively seeking a full-time position as a Quantitative Researcher.

Work Experience

Inception Technology

Quantitative Researcher - Macro and Systematic Commodities

Paris, France

July 2025 - Present

Start-up providing quantitative positioning intelligence tools to tier-1 global commodity trading houses (clients under NDA).

- Extended and productionized a **cross-asset macro Factor Lens** for commodity derivatives, combining factor orthogonalization, sparse rolling exposure selection, weighted refits and lagged out-of-sample diagnostics.
- Built **return and risk attribution** tooling to decompose portfolio P&L into systematic factor, intercept and residual components, with linked multi-period contributions and exposure diagnostics.
- Expanded macro, FX, inflation/rates and commodity-curve research pipelines; developed **regime-aware scenario and stress-testing** tools alongside automated data-refresh and model-validation workflows.

Quantitative Researcher Intern

Jan 2025 - July 2025

- Contributed to the enhancement of Inception's proprietary **CTA/Trend positioning model** through volatility-adjusted trend signals, calibrated saturation and dynamic exposure inference from observed Managed Money positioning.
- Analyzed **CFTC COT data** (Disaggregated & Supplemental) to decompose Managed Money exposure into **CTA/Trend, Index Traders, and Discretionary** components.
- Developed positioning diagnostics including **capacity utilization, saturation zones, and flow convexity** to quantify asymmetric positioning risk and potential forced flows.

Funds Avenue

Risk Management Intern

Luxembourg

July 2024 - Dec 2024

- Assessed portfolio risk using **stress tests** and **Value-at-Risk (VaR)** via Python/Excel models and presented risk reports to senior management.
- Applied multi-factor risk frameworks aligned with **Axioma** and **Barra**-style models for factor exposure analysis and systematic variance decomposition.

Extracurricular Projects

ENS / QRT Data Challenge - Asset Allocation Forecasting | *Python, Machine Learning* Jun 2026 - Present

- Currently ranked 6th out of 1,486 participants** on the public leaderboard, with a **0.555 public score**, in QRT's ENS-hosted Asset Allocation Performance Forecasting challenge.

Gueant-Lehalle-Fernandez-Tapia (GLFT) Market Making Lab

Sep 2025 - Present

| *Python, NumPy, pandas, SciPy*

- Implemented and unit-tested exact finite-horizon GLFT quotes under inventory constraints, keeping the paper's Poisson benchmark separate from empirical execution modeling.
- Built a causal BTCUSD perpetual replay with latency, partial fills, approximate queue-ahead and inverse P&L; evaluated a side-specific fill-hazard model with chronological out-of-sample diagnostics.

Portfolio Optimization Strategy | *Python, NumPy, SciPy, Matplotlib*

Jan 2024

- Constructed optimal portfolios using Mean-Variance Optimization via `scipy.optimize` to maximize the Sharpe Ratio.
- Simulated thousands of portfolios (Monte Carlo) to visualize the Efficient Frontier and the Capital Market Line (CML).

Education

Neoma Business School

MSc Corporate Finance & Investment Banking | **GPA: 4.0/4.0**

Rouen, France

Oct 2023 - Dec 2024

- Double degree with ESIGELEC.
- Thesis: Stochastic Models and Real Options in Corporate Valuation** -- combined WRDS/Compustat cash flows, US Treasury rates and Monte Carlo simulation to compare deterministic and stochastic NPV and study expansion/abandonment real options.
- Key Modules:** Financial Engineering, Advanced Corporate Finance, Mergers & Acquisitions, Corporate Strategies.

ESIGELEC

MEng of Science, Applied Mathematics | **Top 10% of Class**

Rouen, France

Sep 2018 - Dec 2024

- Key Modules:** Advanced Probability, Machine Learning, Monte Carlo Simulation, Applied Statistics for Finance.

Skills & Interests

Languages: French (native), English (C1)

Programming: Python (NumPy, pandas, scipy, scikit-learn, Polars), SQL

IT: Microsoft Office, $\LaTeX$

Interests: Fencing (Regional Level & Referee), French History
